

Code Racer

Code Racer is a small project by abases.

It's a code snippet manager built around Discord.

The idea is simple: instead of using a separate app or database to save code snippets, you just post them in a Discord channel. A Discord bot reads the channel and stores whatever code gets posted there.

So the messages in Discord basically become the database. Post a snippet, the bot picks it up, and it's saved.

The repo itself is pretty minimal, just a few files: `index.js` and `sockets.js` run the bot and handle the storage/communication, and `package.json` lists the dependencies.

Below is an example of it in action, two JavaScript snippets posted in a Discord channel, saved automatically by the bot.

That's really the whole project: a Discord bot that reads from channels and stores the code for you. Pretty cool way to reuse a chat app as a lightweight code snippet store.

```
function sumAsciiDigitsOfUppercase(input) {
  let totalSum = 0;
  for (let i = 0; i < input.length; i++) {
    const c = input[i];
    if (c >= 'A' && c <= 'Z') {
      let ascii = c.charCodeAt(0);
      while (ascii > 0) {
        totalSum += ascii % 10;
        ascii = Math.floor(ascii / 10);
      }
    }
  }
  return totalSum;
}
```

```
function quickSort(arr) {
  if (arr.length <= 1) {
    return arr;
  }
  const pivot = arr[Math.floor(arr.length / 2)];
  const left = arr.filter(x => x < pivot);
  const middle = arr.filter(x => x === pivot);
  const right = arr.filter(x => x > pivot);
  return [...quickSort(left), ...middle, ...quickSort(right)];
}
```

```
public static boolean isPrime(int num) {
  if (num <= 1) return false;
  if (num <= 3) return true;
  if (num % 2 == 0 || num % 3 == 0) return false;
  for (int i = 5; i * i <= num; i += 6) {
    if (num % i == 0 || num % (i + 2) == 0) {
      return false;
    }
  }
  return true;
}
```
